Please find below our proposal and quote for the works - Security Proposal Overview:

- Steel to all lower ground openings on site
- 8 no. accessible steel security door

**Steel Security**

We propose installation of steel security to all windows and doors around the site.

We propose to use solid steel security sheets, fixed directly into the window frames, secured with anti-tamper security fixings, which cannot be removed by commonly available tools.

We have also proposed to install 8 steel security doors, to retain access into the site for viewings or inspections, while vacant.

Our security doors measure 900mm x 2100mm but can be fitted to accommodate any door opening size.

The door comes with 2 no. 5-Level mortice deadlocks top and bottom, and again are secured using our anti-tamper security fixings.

PLEASE NOTE - We only offer doors on a hire basis.

Please note that this proposal is provided for informational purposes, and while every effort has been made to ensure accuracy, Secure Site UK Limited accepts no liability for any errors or omissions contained herein.

The costs quoted are for unhindered access to site for delivery of services, but should there be delays or the job aborted, then all associated additional costs will be levied.

This quotation is prepared based on installing the steel directly into the window frames on site. If any of the frames need to be undamaged, we can build and fit a timber frame to the external reveals, installing the steel sheets to the frame and protecting the original window frames from damage. However, this will result in an uplift in the costs and the work would need to be requoted accordingly
